Understanding the Error: `UndeclaredPrefix: Cannot resolve 'tns: ScholarshipType as a QName: the prefix "tns" is not declared, xsd(s4s-att-invalid-value)`

Solution

1. **Declare the Namespace:**
   - Introduce a namespace declaration for the `tns` prefix. This should be done at the root level of the XML schema.
   - The namespace URI can be any valid URI, but it's common to use a unique identifier for your schema.

Including the XSL stylesheet:

By including the XSL stylesheet, we can show the data in tabular format

The stylesheet can be included in xml as –

<?XML stylesheet href = "style.css" Type = text/css?>

<?XML stylesheet href = "style.xsl" Type = text/xsl?>

UniQuest User Data
